SOFTWARE OR SENIOR SOFTWARE ENGINEER

Adelard exists to provide independent and technically sound advice on how to engineer and assure the trustworthiness of computer-based systems.

We are a small but influential consultancy working in the nuclear, medical, defence, finance, air traffic control and rail sectors and in critical infrastructure protection.

Adelard has a vacancy for a Software or Senior Software Engineer, based in London.

The role

We are looking for someone to work in some of the following areas:

- **Software development and maintenance**: you would develop parts of our key software products and maintain our existing in-house and commercial applications. Our most recent developments have been in Grails and VB.NET, but we also use Java, Python, Ruby, C, OCaml and Visual Basic 6. Some of the applications you would be working on need to have a usable and intuitive user interface. Often there is a need to integrate them with existing applications, so previous experience of integrating different kinds of technologies is desirable. You should be prepared to learn new languages and frameworks as required.

- **System administration**: we run our internal systems on VMware vSphere and Ubuntu Linux. You would be responsible for managing these systems.

You will need a good degree in a relevant subject and experience in industrial scale software development. You should be able to present technical material clearly. Previous customer-facing skills would be an asset.

As the work might involve classified information, qualification for UK security clearance would be desirable.

The position will involve travel within the UK, and in some cases to Europe and the US.

Why Adelard?

At Adelard you will be working within an interdisciplinary consultancy of international standing. We are a small firm, so we are a flexible and dynamic place to work with minimal bureaucracy. You will be able to influence the company’s development and have easy access to senior staff. Staff are encouraged to be innovative and the company responds quickly to change.

Adelard’s diverse interests mean that staff at Adelard work on several projects at once, often in several different industries.

Salary will be in the range £25,000 to £63,000 plus benefits, depending on experience.

To apply please submit a CV, and a letter of support (citing at least two referees) to Victoria Raven at office@adelard.com. Your application should explicitly make clear how you satisfy the above requirements.

Closing date is March 6th 2015 and applications received after this date may not be considered.

Applications received before this date will be considered earlier.
